INSTALASI VeNUS TILES PORCELANTO

1. Untuk pemasangan granite tiles dengan warna dan ukuran yang sama dalam satu area, pastikan kode "tipe produk", "kode produksi" dan "tanggal produksi" yang tertera pada masing-masing box harus sama.
2. Gelarlah terlebih dahulu untuk melihat kesamaan *shading* (warna) dan juga pastikan kerataan permukaan tile dengan cara mempertemukan kedua sisi permukaan tile secara berhadapan (mengacu pada spesifikasi teknis produk, SNI-18070545-2)
3. Lantai atau dinding kerja harus sudah di *screed* (untuk lantai) atau *diplester* (untuk dinding) dengan kondisi water pass rata dan dalam keadaan bersih. Selama pekerjaan pemasangan sebaiknya tidak ada pekerjaan lain (plafon, cat, listrik, plumbing, dll) untuk aplikasi (pada lantai atau dinding outdoor atau indoor atau wet area) disarankan menggunakan semen instan atau tile adhesive untuk mendapatkan hasil yang optimal (karena memiliki daya rekat yang tinggi) sehingga tidak mudah popping atau lepas.
4. Kemudian letakan tile yang akan dipasang diatas adukan (Pola pemasangan mengikuti arah panah atau logo yang tertera disisi belakang tile). Atur nat dengan menggunakan spacer untuk membuat jarak nat. Jarak nat yang disarankan sebaiknya ± 2 mm untuk polished tiles (mengkilap) dan ± 3 mm untuk unpolished (tidak mengkilap atau bertekstur), gunakan waterpass untuk mengukur kerataan lantai.
5. Bersihkan dengan segera permukaan tile dari sisa bahan adukan atau adhesive yang menempel (dibersihkan setiap ± 3 m² lantai terpasang) dan diaman min. 1 x 24 jam sampai mengering. Setelah itu dapat dilakukan pengisian nat. Pembersihan dilakukan dengan menggunakan kain lembab yang bersih. Selama masa pemasangan dan masa perawatan, hindarkan zat atau cairan yang mengandung kimia dan bahan pewarna yang kuat (teh, kopi, tinta, dll), jika hal ini terjadi harus segera dibersihkan.

Pengisian Nat atau *Grouting*

1. Sebaiknya dilakukan 1x24 Jam setelah pemasangan Granite tiles pada lantai atau dinding selesai. Sebelum pengisian nat dilakukan, bersihkan tiles dari debu/kotoran/minyak terutama pada celah nat.
2. Aplikasikan semen pengisi nat/grout secara merata.
3. Gunakan bahan karet atau spon pengisi nat lalu tekan sampai celah nat terisi padat dan permukaan nat berada lebih rendah dari permukaan tiles.
4. Bersihkan segera sisa grout yang menempel pada permukaan tiles dan diaman 2 x 24 jam sampai grout mengering.

INSTALASI VeNUS TILES MOSAICO (*Wet System / Tile Adhesive*)

1. Pastikan kode atau seri dan tipe yang ada dibalik kemasan sudah sesuai atau sama antara satu dengan yang lainnya. Kecuali untuk mosaik yang customize hal ini agar menghindari terjadinya *shading* (belang).
2. Susunlah terlebih dahulu mosaik sesuai dengan gambar yang diinginkan (di gelar sebelum terpasang), terutama jika mosaik tersebut adalah tipe customize. Pastikan media yang akan diaplikasikan dalam kondisi sudah
 - Untuk aplikasi dinding plesteran, pastikan permukaan dinding tersebut sudah rata (rata jidar) dan tidak kopong.
 - Jika permukaan dinding yang sudah di cat, pastikan cat tersebut sudah dikupas bersih terlebih dahulu.Ukurlah area aplikasi, dan buatlah moulding atau tarikan tali atau kepalaan untuk memastikan kesesuaian ukuran mosaik yang akan diaplikasikan pada area tersebut. Jika terdapat kelebihan ukuran mosaik terhadap bidang aplikasi, diharapkan tidak memotong chip mosaik, bila kondisi tersebut terjadi, gunting jaring pada mosaik tersebut, kemudian jarak nat antara chip mosaik yang satu dengan yang lainnya disesuaikan dengan ukuran bidang aplikasi, misalkan dibuat agak lebar atau menyempit pada setengah area terakhir.
3. Setelah semuanya siap, pemasangan mosaik menggunakan adukan semen instan atau tile adhesive. Untuk tipe mosaik kaca dengan warna terang atau transparan gunakan tile adhesive warna putih. Aplikasikan adukan dengan menggunakan roskam bergerigi (untuk ukuran gerigi dapat dikoordinasikan dengan technical support PT. Venus Ceramica International).
4. Karena sifat adukan semen instan atau adhesive lembut mengering, penempelan pada dinding, gunakan penahan untuk lembaran mosaiknya agar tidak turun (konsultasikan ke pihak technical support).
5. Setelah selesai proses instalasi tunggu 1x24 jam, baru dapat dilakukan proses *grouting* atau pengisian nat.
 - * Tidak semua tipe mosaik dapat diaplikasikan dengan wet system, keterangan lebih lanjut hubungi PT. Venus Ceramica International.

Pengisian Nat atau *Grouting*

1. Tentukan warna *grout* sesuai jenis mosaik
 2. Lakukan *grouting* secara merata dan padat, ketinggian nat sebaiknya dibawah posisi permukaan mosaik.
 3. Bersihkan segera sisa-sisa *grout* yang tersisa di permukaan mosaik, jangan biarkan sampai mengering.
Catatan :
 - Untuk *grouting* tipe mosaik dengan permukaan tekstur lakukan *grouting* secara hati-hati jangan sampai sisa *grout* menumpuk diatas permukaan teksturnya.
 - Untuk pemasangan mosaik secara non permanen harap konsultasikan ke bagian technical support PT. Venus Ceramica International.
